Summary

First-year B.Tech CSE student building foundations toward SRE and platform engineering through hands-on C++ and Linux systems projects. Published author of three fantasy novels with demonstrated execution, long-form technical writing discipline, and independent distribution experience.

Projects

NodeWatch | *C++17, Prometheus Exposition, Linux Daemon, CMake*

- Architecting a lightweight host telemetry monitoring agent in C++ designed to run as a continuous Linux background service, parsing `/proc` kernel interfaces (`/proc/stat`, `/proc/loadavg`, `/proc/meminfo`).
- Implements an embedded HTTP server exposing machine-level health metrics formatted in standard Prometheus exposition format (`/metrics`) for external scraper ingestion.

Host Inspector | *C++17, CMake, Linux /proc* github.com/AnishAirsang/host-inspector

- Parses Linux `/proc/loadavg` and `/proc/meminfo` virtual filesystem interfaces to extract and compute 1-, 5-, and 15-minute system load averages alongside total, available, and percentage RAM usage.
- Configured build targets with CMake targeting modern C++17, compiling with strict warning flags (`-Wall -Wextra`) to enforce structured file input/output validation and type safety.

Technical Skills

Languages: C++, Python, Bash | **Familiar with:** Go
Systems & Core: Linux (Ubuntu/Debian), POSIX Syscalls, /proc Virtual Filesystem
Developer Tools: Git, GitHub, CMake, GCC/Clang, GDB
Cloud Infrastructure: Google Cloud Platform (GCP), Cloud Functions

Publications & Writing

Published Author – 3 Fantasy Novels (75+ copies sold) 2021 – Present
